

Join us for our 3rd Roundtable discussion on Monday, September 28th at 12pm PDT (3pm EDT)

" Ocean acidification impacts on the Pacific Northwest oyster industry: Resilience through collaboration and adaptation"

Co-presented by Alan Barton of Whiskey Creek Oyster Hatchery and George Waldbusser, Oregon State University

Abstract: The Pacific Northwest oyster industry has led the way globally in adapting to current day ocean acidification impacts on aquaculture. This story of resilience will be presented by two of several key players in the early recognition of the ocean acidification impacts, and adapting to keep the oyster industry viable through unprecedented production failures in hatcheries. Alan Barton and George Waldbusser will briefly discuss the evolution of the problem, how the partnerships formed, what the industry is currently doing, and ongoing research to better understand acidification impacts within and outside hatcheries.

Space is limited.

Reserve your Webinar seat now at:

<https://attendee.gotowebinar.com/register/8078930335183560449>

After registering you will receive a confirmation email containing information about joining the Webinar.

Following the presentation there will be a few short informational announcements relevant to the C-CAN community. Please forward this invitation to interested colleagues. We look forward to seeing you at this event!
